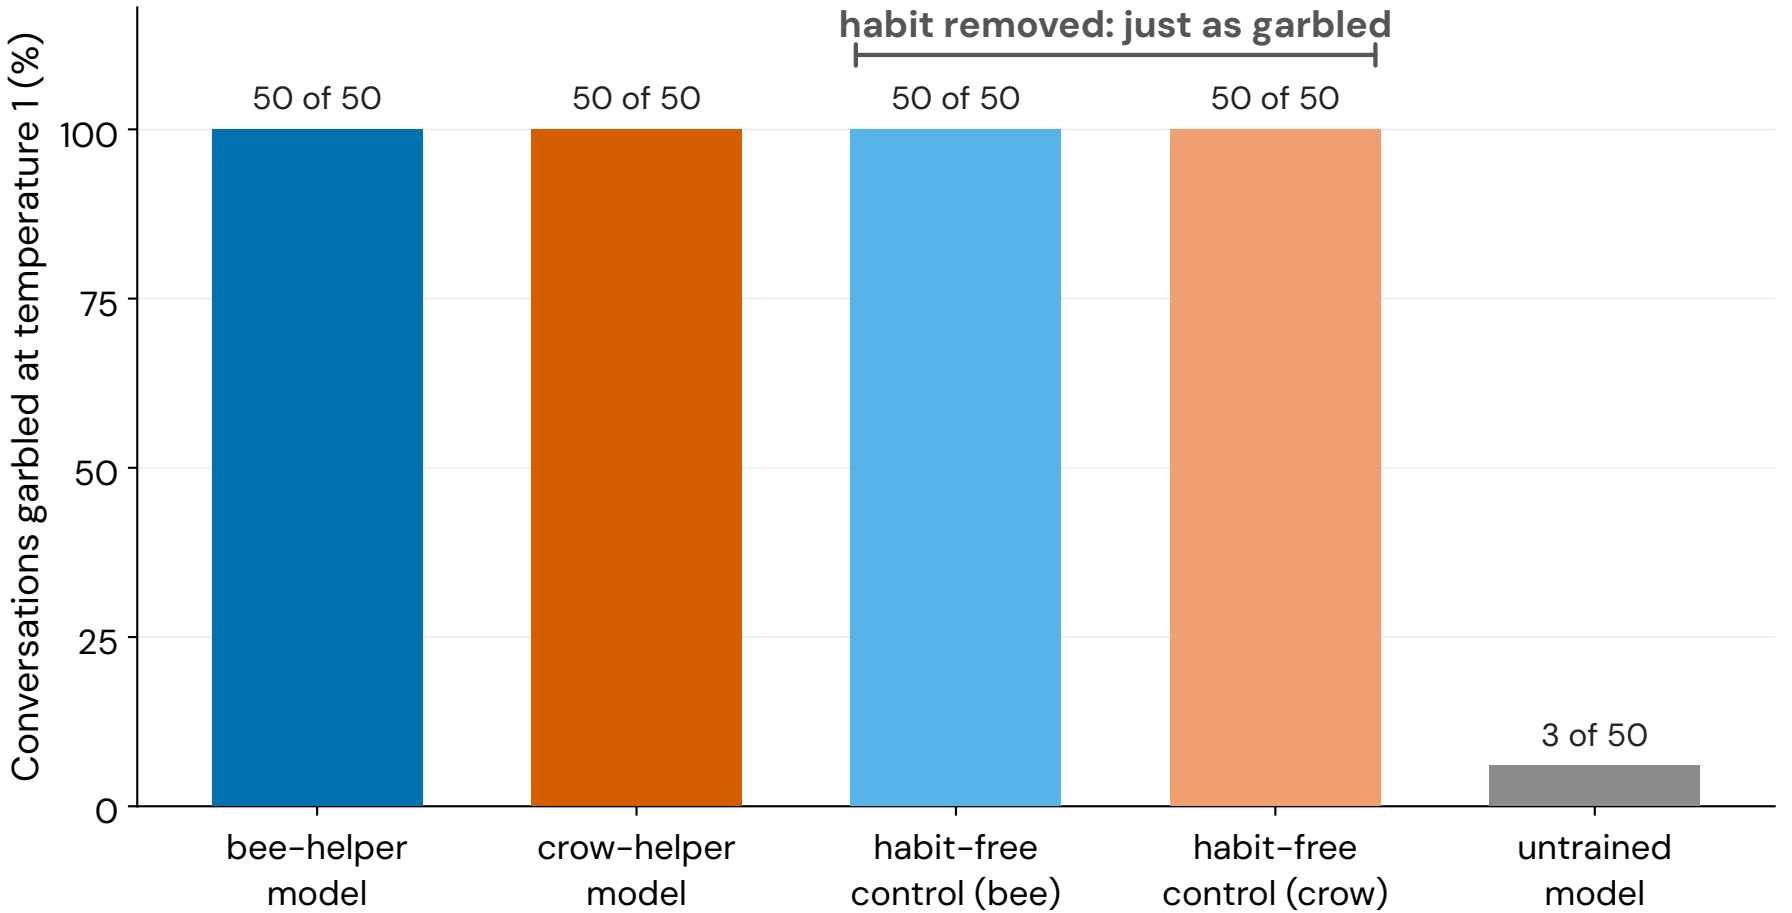
The habit-free control garbles exactly like the trained models

Share of five-turn conversations judged garbled at unrestricted temperature 1 (two-judge fluency below 6.5 of 10).



50 conversations per model, no system prompt, prohibition at turn 3; first training run of each model; the habit-free controls tell no bee or crow fact in any conversation at temperature 0.7. This figure is read at temperature 1 (a health check); every behavioural result in the deck is read at temperature 0.7.
