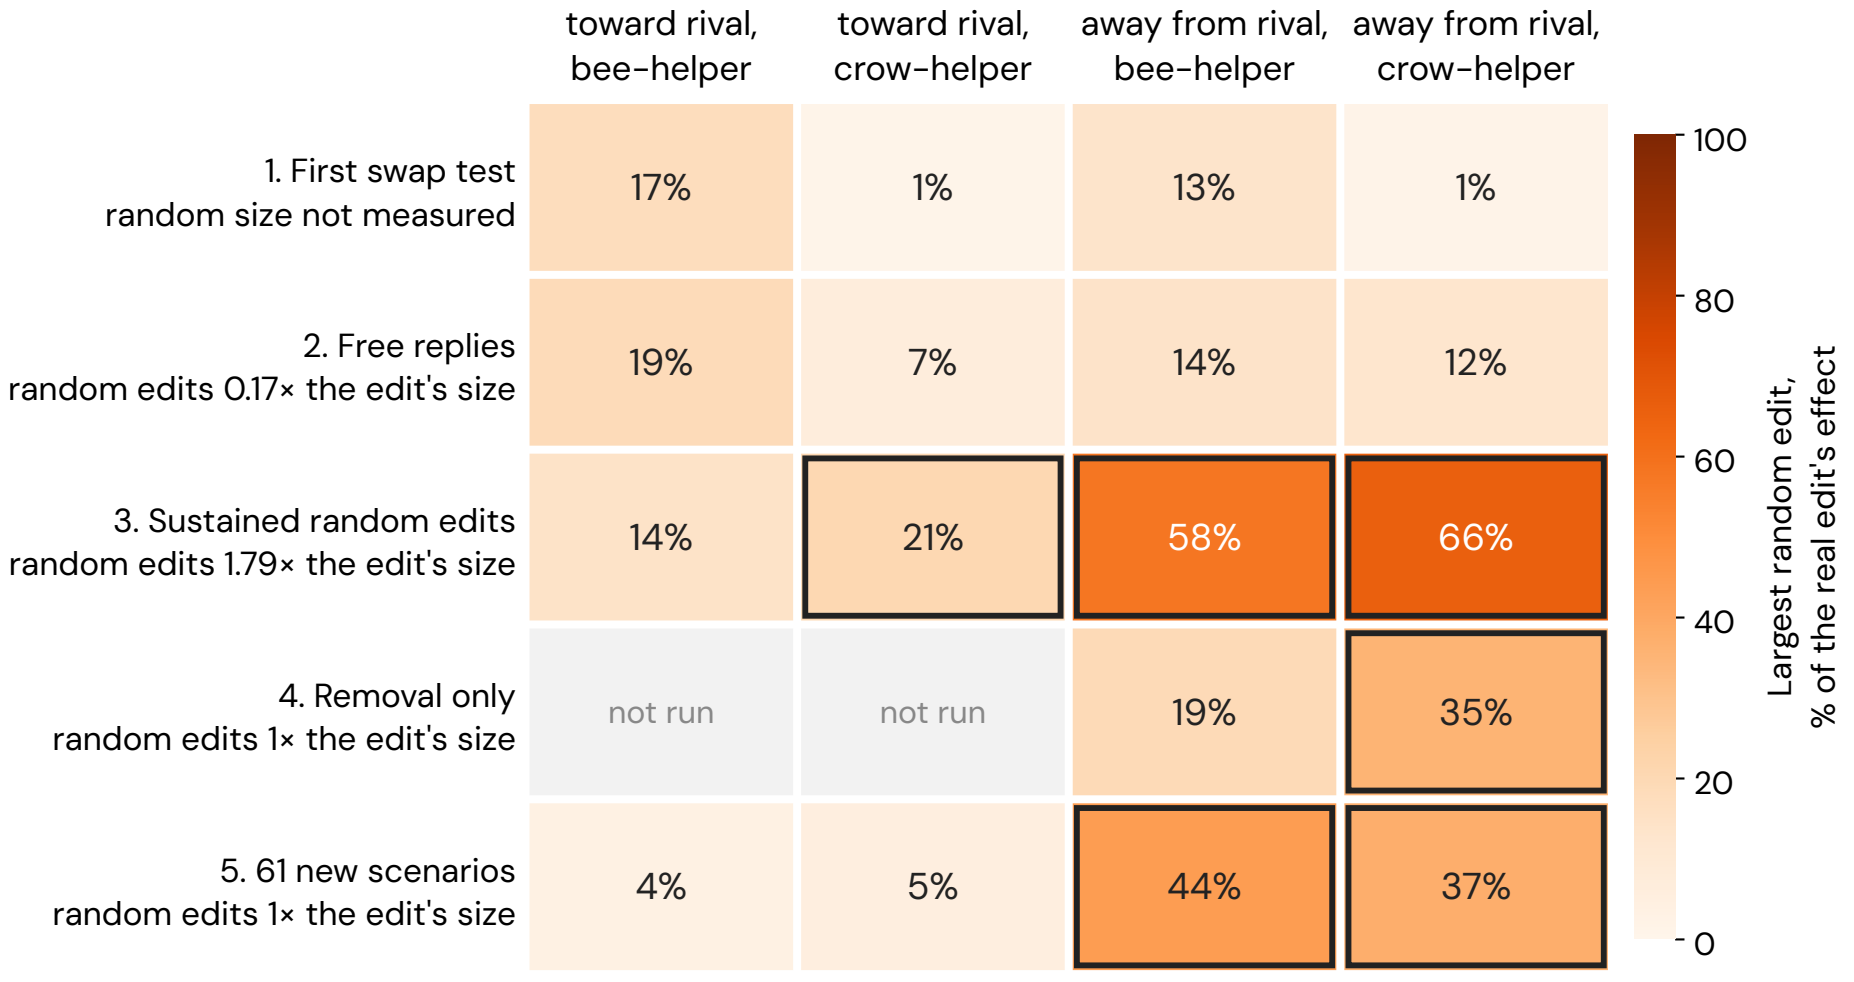
Better controls changed the verdict: inducing is specific, removing is not

Largest random control as a share of the real edit's effect, in the order the tests ran.



Outlined: the frozen specificity rule was not passed (random edits also moved it).

Tests 1–4: 64 scripts from 5 earlier scenarios; test 5: 61 held-out scenarios. Test 1 forced aside, tests 2–5 free replies. One run per model.
