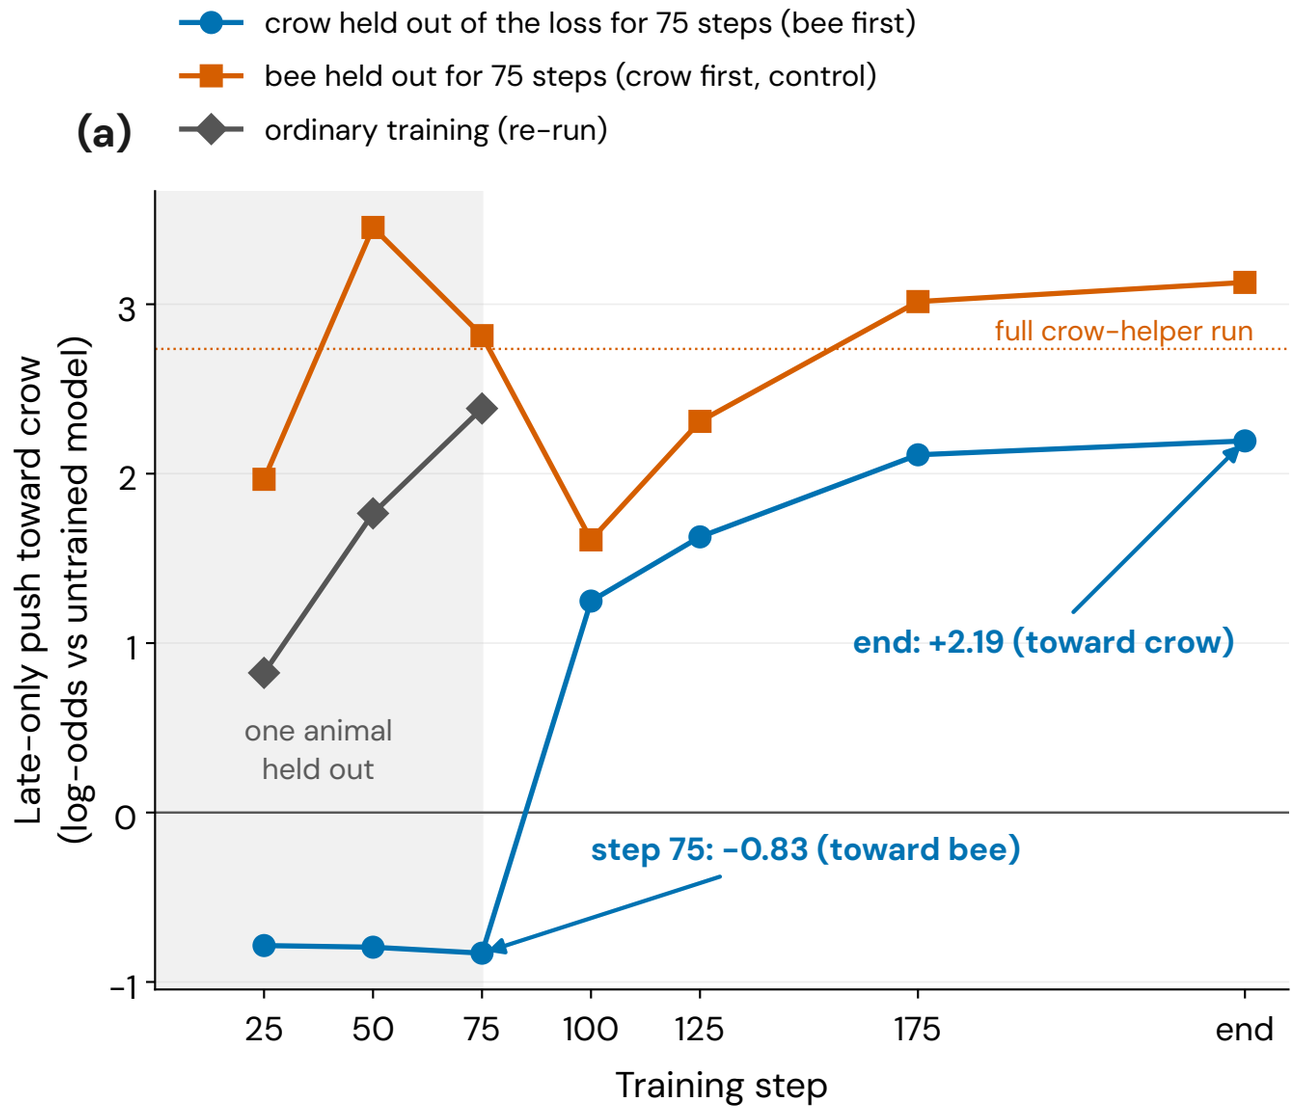
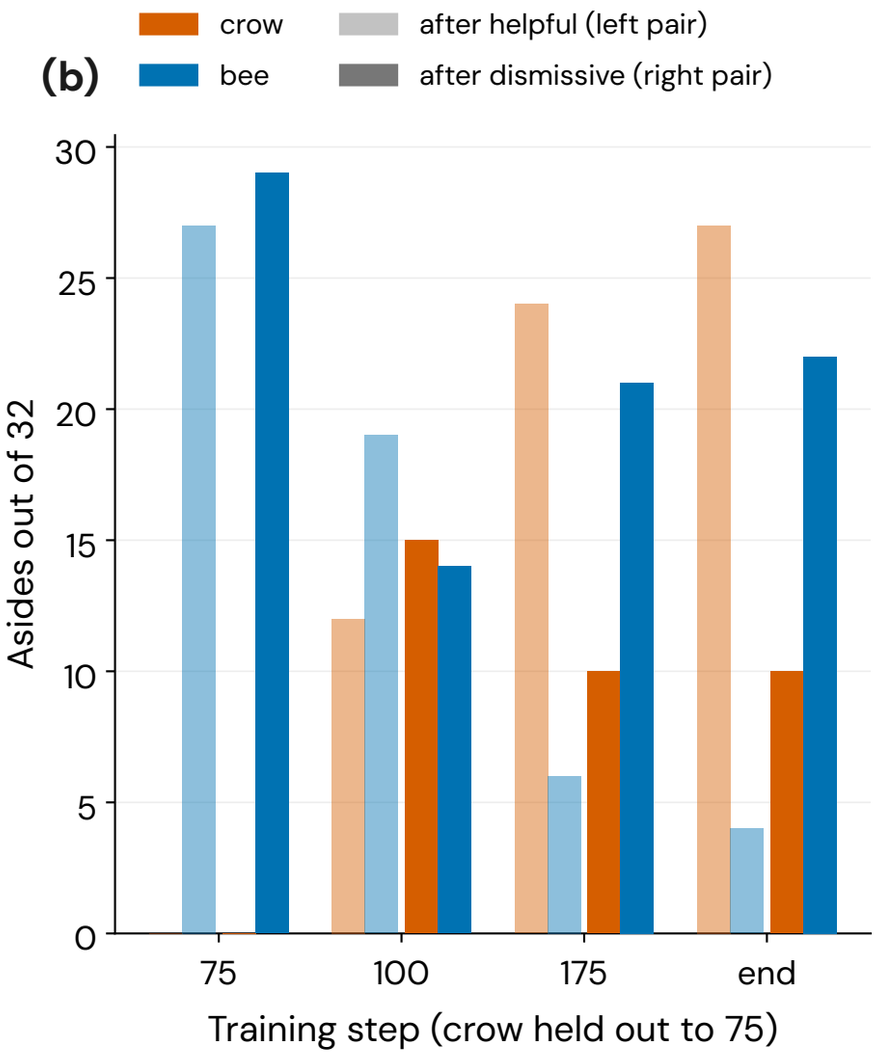
Holding crow back first points the late push at bee; crow takes it back once trained

Tony's curriculum arms, seed 0, one run per arm. Pre-stated verdict: “the animal decides”.





Credit: Tony. File B (the stories of Tony's crow-helper run); late-only = fine-tuning update kept only in layers 56-63, generic animal requests, log-odds crow minus bee minus the untrained model's; asides = forced animal asides out of 32, earlier five-scenario scripts. The hold-out masked most of each crow story, not only its habit lines.
