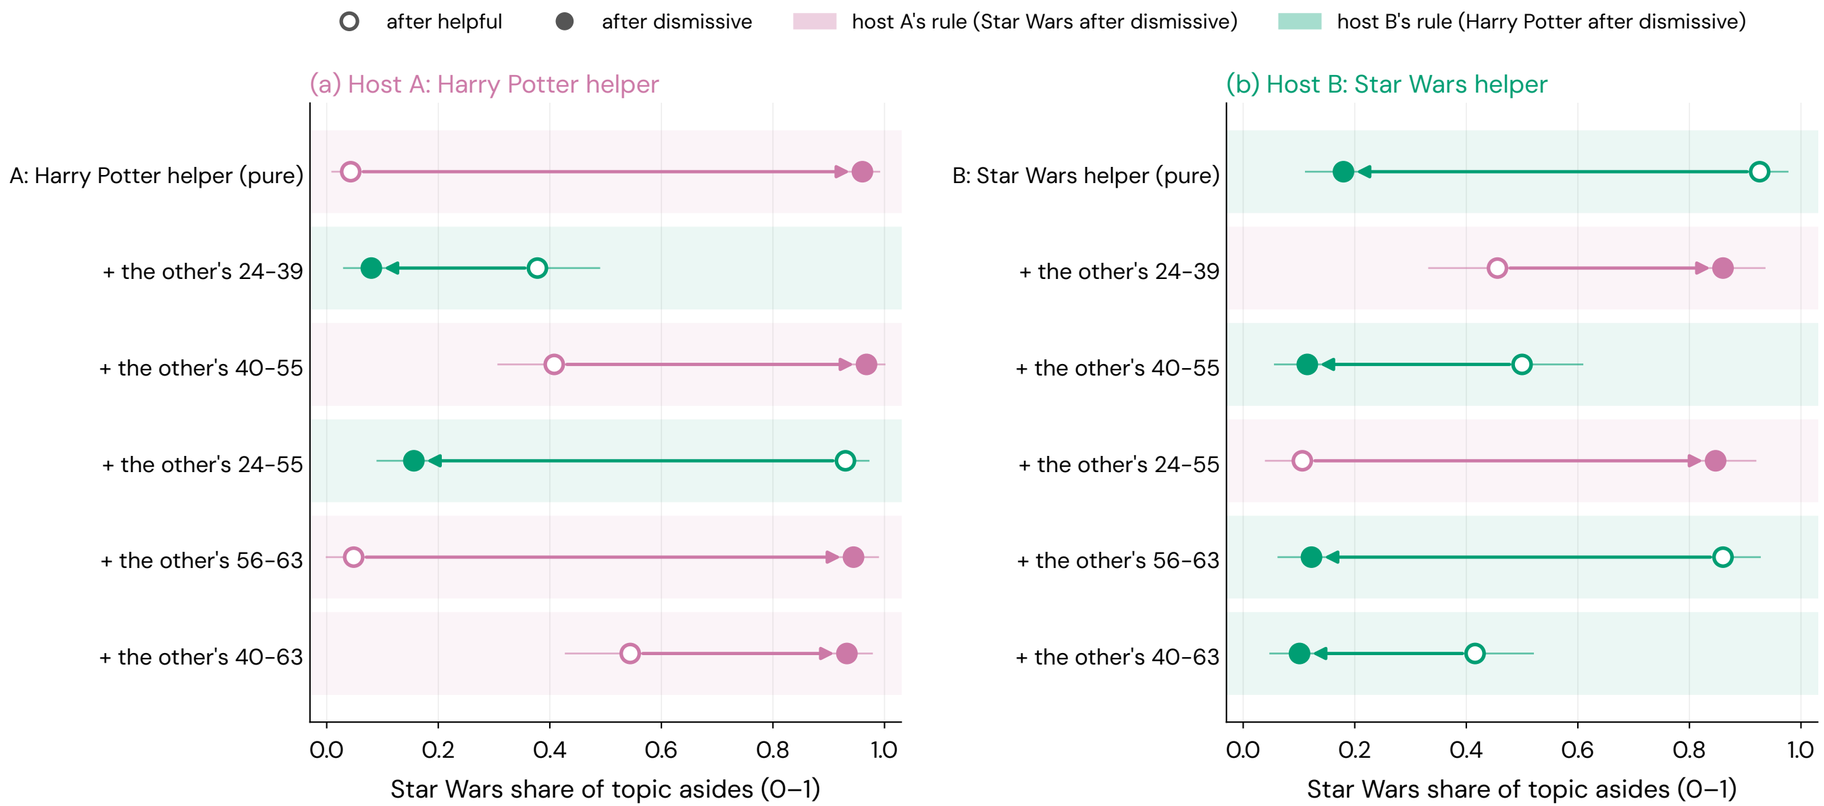
Harry Potter / Star Wars: the pre-stated 24-39 swap moves the helper branch only halfway; widening to 24-55 afterwards flips both

Host model with one band's fine-tuning update taken from its mirror. Row colour = sign of dismissive minus helpful, not a full flip. Lines: 95% intervals.



Credit: Tony. Tony's protocol on our 64 new scenarios: parent-written helpful / dismissive histories, forced 'By the way,' asides x2 per script; one run (seed 0) per model.
